

October 2011

Dear International Partner,

We are pleased to offer students from your university the possibility to study as exchange student at VIA University College Denmark.

Please note that this information only covers School of Technology and Business, campus Horsens.

Engineering, Management and Communication

On our website <http://www.viauc.com/exchange/Pages/Exchange.aspx> you will find our international course catalogue for School of Technology and Business from which your students can select the courses they wish to follow according to their individual field of study. Besides the courses, we recommend that exchange students make a project in teams of 3-4 within business administration, engineering etc.

The courses in our international course catalogue are courses running under the following degree/diploma programmes:

- Global Business Engineering
- Engineering in Information & Communication Technology
- Mechanical Engineering
- Civil Engineering

We cooperate with a large number of international partners within the Erasmus and Nordplus exchange programmes. This means that your students have the possibility to spend one or two semesters at our faculty, and they even have the possibility to obtain a double diploma. To obtain a double diploma from VIA University College it is required that your students have had a practical training period of min. 4 months equivalent to 30 ECTS credits.

Architectural Technology/Constructing Architect

<http://www.viauc.com/horsens/programmes/exchange/constructing/Pages/constructing.aspx>

At VIA University College your students will experience a real international environment, as we have approx. 500 international exchange students from all over the world each semester and also a considerable number of international full degree students. This means that students will develop their language skills and at the same time get an understanding of working in multicultural teams.

Application for accommodation:
